

D. Beetles

Labeling Word

There are over 200,000 species of beetles, making them the most numerous group of insects. Beetles follow the same basic plan. Every beetle has a head, thorax, and abdomen. Each beetle has six legs, two wings, and two antennae. The head is the most important part of the beetle's body. It contains the brain, eyes, and mouthparts. The thorax is the middle part of the body. It contains the heart, lungs, and the bases of the legs and wings. The abdomen is the rear part of the body. It contains the digestive system and the reproductive organs.

1. Head
