Course description

What the website says: Intermediate macroeconomics introduces theories of aggregate economic activity including the determination of income, employment, and prices; economic growth; and fluctuations. Macroeconomic policies are explored in both closed and open economy models. ECON 3070 and 3080 may be taken in any order; there is no recommended sequence.

Prerequisites: i) ECON 1000 or 2020; and ii) either ECON 1078 and 1088, or MATH 1300, or MATH 1310, or MATH 1081, or MATH 1080, 1090, and 1100, or APPM 1350, or equivalent.

What I say: Where microeconomics focuses on individual markets and consumer behavior, macroeconomics is a field that studies the economy as a whole. At this level, economists develop models to better understand the behavior of the aggregate economy in the long and short run. For the models that will be presented in this class, the main players are consumers, firms, and governments. My objective for the course is to introduce you some of the theoretical models used by macroeconomists. I will also provide you with some real-world context and we will discuss the advantages and disadvantages of our theoretical models. I hope you will leave this course with a better understanding of how economists model the macroeconomy, as well as the ability to engage in informed conversation about macroeconomic issues with others, regardless of their knowledge of economic theory.

The models covered in this course require calculus and algebra. Some common tools will be discussed
