

2020 Employee Learning Week

Reflection & Metacognition for Managing in Uncertain Times

Slides: bit.ly/3qe4g08

Session Description

Navigating the uncertainty of COVID-19 in our workplace and on our teams, as well as the reality of furloughs and budget cuts present a great deal of uncertainty for supervisors and staff, as well as strong emotions and reactions. Assistant Professor Linds Roberts will share strategies from learning theories on how self-reflection and metacognition can help us navigate these times mindfully. We'll use active learning techniques to discuss situations you are facing in your workplace and which strategies can help.

Learning Objectives

After attending this session the learners will be able to:

- identify metacognitive strategies.

- Value self-reflection for compassionately responding to your own and others' needs.

- Create a plan to implement a metacognitive or self-reflective strategy in the coming week.

Definitions

Metacognition - Awareness of your own thinking, emotions, etc., “higher order thinking” that involves noticing, planning, and regulation

Micro-Strategies

1. Take note - memos, journaling, voice recordings reflecting on the project or situation to which you want to bring more metacognitive awareness (metacognitive strategies: monitoring, planning; Black et al, 2016)
2. Mindful moment - before opening your laptop or email for the day, take one minute to ground and check in with yourself. Works well when coming back from lunch or an interruption, too. (metacognitive strategy: observing; Black et al, 2016)
 - a. Internal: How is my energy? What thoughts, feelings, sensations am I aware of?
 - b. External: What does my team need from me? How are they feeling, what concerns or barriers are they experiencing?
3. Track time - next time you or your team take on a new project, keep a tally of how many hours are spent on it. We are often surprised by how much longer things are taking during COVID! (metacognitive strategy: time awareness)
4. Debrief - intentionally set aside time to talk over a meeting or project with a—eet | | |

Let's Discuss

Do any of these strategies apply to the situations you've brainstormed? Are there other strategies that could be helpful?

Meta Moment

What is one idea you've had from today that you might be able to try this week?
(think: small shifts)
